

Alamosa School District – Demographics

Shannon L. Bingham
11/6/23

Observations – The Alamosa School District (ASD) has experienced predominantly stable demographics during the past decade with stable population, demographics and economic conditions. Due to housing costs and limited demand, very little new housing has been constructed in the district. As is the case in most Colorado school districts, there has been a slight decline in birth rates. The district exports a consistent number of students to adjacent districts and on-line education providers and this tendency accelerated during the pandemic. Preliminary enrollment expectations suggest that there will be stable elementary enrollment, a slight decline in middle school enrollment and a decline in high school reflecting smaller incoming grades.

Basic Demographics – The 2020 Census suggests little demographic change in the geographic area covered by the district.

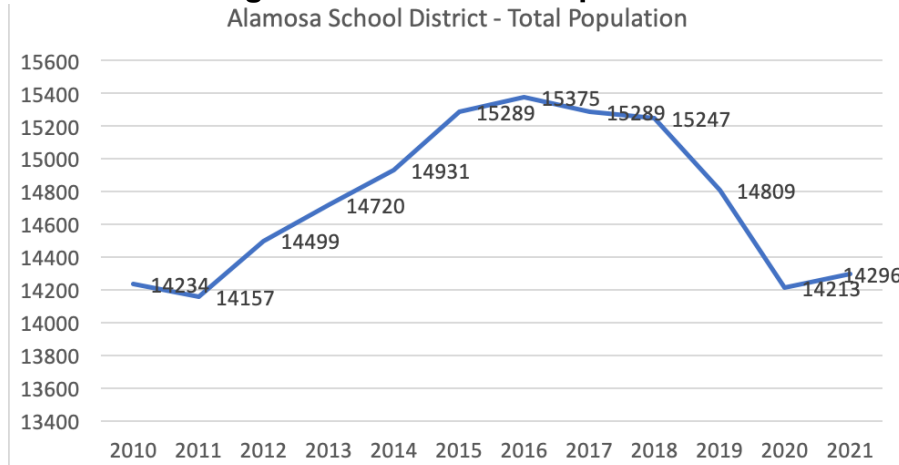

Figure 1 – Standard Demographic Indicators

- Total Population** – 15,324 – 2020, **Total Households** – 5,605 – 2021
- Total Housing Units** – 6,528 – 2020
- Employment Rate** – 57% - 2021, **Median Household Income** - \$45,124 - 2021
- Education** – Bachelor’s Degree or Higher – 25.1% - 2021
- Health** – Population Without Health Care Coverage – 10.1% - 2021

Total Population – Total population rose mid-decade and then returned to 14,296 in 2021 after the Pandemic.

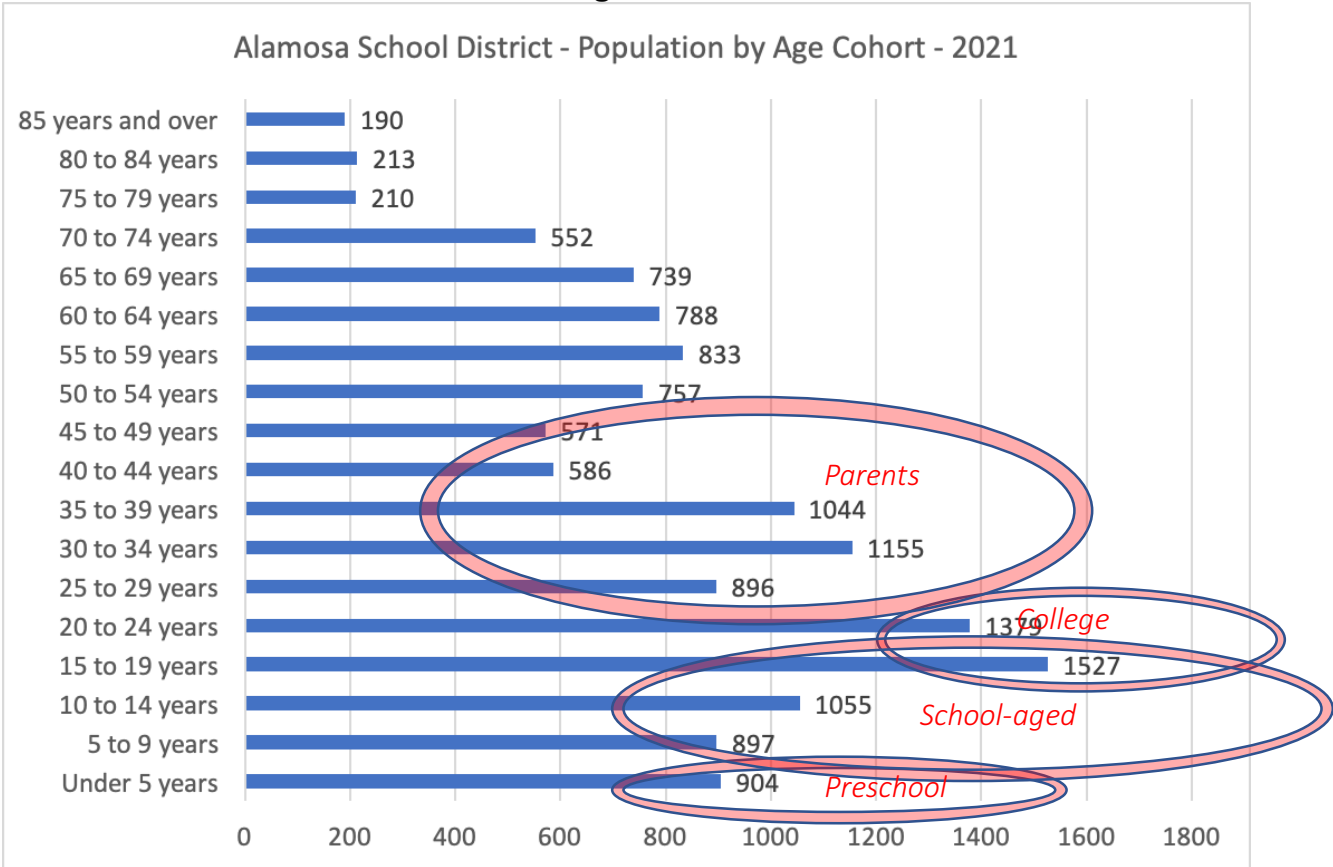

Figure 2 – ASD Total Population

Alamosa School District - Total Population

5-year Age Cohorts – The child and family age cohorts are well-represented in the ASD. Preschool and elementary school-aged cohorts are smaller than middle and high school and the high school cohort is somewhat confused by 18- and 19-year old college students at Adams State University which is located in Alamosa. The slight difference between preschool and elementary cohorts at approximately 900 and the middle school group at 1055 is significant and suggests smaller incoming population into the secondary age grades. These figures are displayed in Figure 3.

Figure 3

New Housing – There was little evidence of significant new single-family housing construction during driving tours conducted in the district. Two small new subdivisions were noted, but these would have little affect if any on enrollment. There were several new apartment buildings observed during field inspection and these would also produce few children... The County Assessor’s records observed a relatively consistent rate of new housing constructed annually to keep pace with housing stock replacement needs... New home asking prices were generally below State averages according to Zillow and the ASD is generally seen as a housing bargain.

Labor Statistics – The Alamosa County labor force has risen in size and its growth rate is generally behind the State of Colorado... Unemployment rates remain low and rose and fell consistent with other areas affected by the Pandemic... Figure 4 displays employment status details... Figure 5 illustrates the largest sectors of the school district economy with ASD and Adams State comprising the education employment category which was the largest sector by far... Employer rankings were not available.

Education	1972	28.9%
Arts, entertainment	651	9.6%
Other services	447	6.6%
Public administration	498	7.3%
Employed According to 2022 American Community Survey	6815	

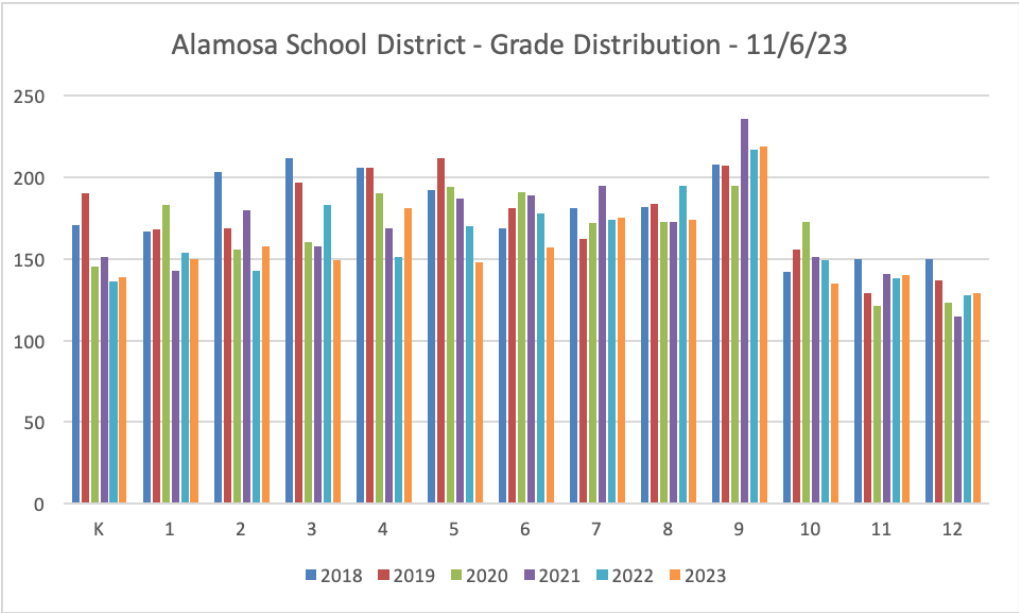

Births – According to the Colorado Department of Health, births in the geographic boundary of the ASD have declined by approximately 40 babies per year during the past decade – approximately 20%. This is consistent with other Colorado districts who are also experiencing declines as Millennial and Generation Z young adults have smaller families. This trend appears to have stabilized and elementary enrollments are expected to remain relatively flat. Figure 6 shows the detailed annual birth count data.

Figure 6

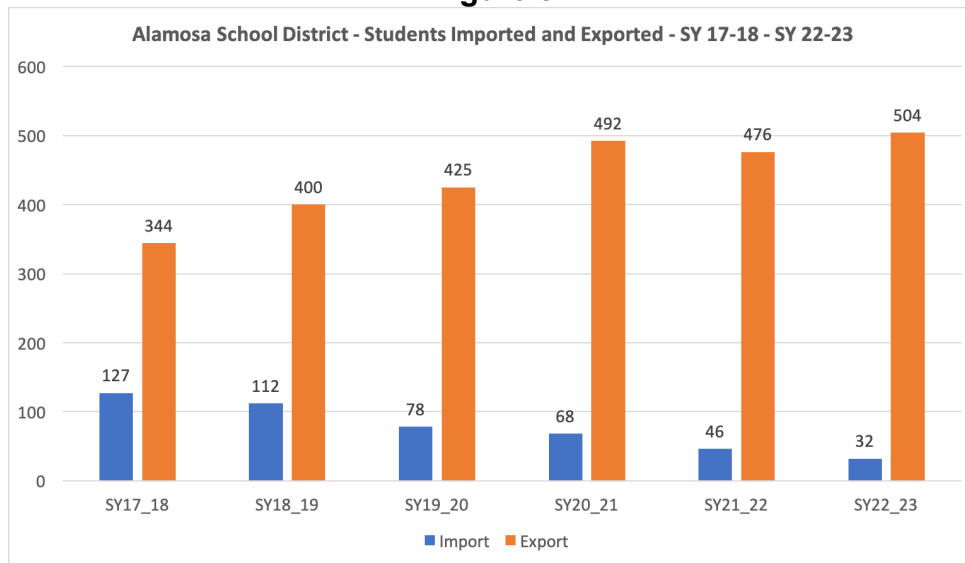

Grade Size - Elementary and high school grade sizes have declined in the past five years as shown in Figure 7.

Figure 7

Students Imported and Exported - The district has exported more students and imported fewer as on-line programs have drawn more enrollment. During the Pandemic, on-line charters grew significantly and many were sponsored by small districts in Eastern Colorado. Many other districts have lost enrollment to these providers. ASD students who leave the district have increased to 504, but this departure appears to have stabilized. The six-year trend is shown in Figure 8.

Figure 8

Districts Receiving Exported Alamosa Students – Figure 9 shows districts who draw students from ASD’s geographic boundary. The small Eastern Colorado districts are online providers.

Enrollment Forecast Grade Level Summaries – High, Medium and Low – Figure 11 shows enrollment forecasts for ASD grade level schools by high, medium and low expectation. The medium forecast shown is blue is the most likely. According to that forecast, elementary enrollment remains stable for both K-2 and grade 3-5 facilities while middle school enrollment declines slightly... High school enrollment declines by a greater volume.

Conclusion – The Alamosa School District (ASD) has experienced predominantly stable demographics during the past decade with stable population, demographics and economic conditions. Preliminary enrollment expectations suggest that there will be stable elementary enrollment, a slight decline in middle school enrollment and a decline in high school reflecting smaller incoming grades. Career Technical Education programs (CTE) have been the most effective high school enrollment retention strategy State-wide... The district’s current and future CTE programs may be effective in retaining high school enrollment and reducing the magnitude of forecasted decline, but smaller incoming grade sizes will be difficult to reverse... Other than high school enrollment challenges, ASD should expect a consistent and stable future.
